

Environmental Policy

Holtec Britain is the UK subsidiary of Holtec International, a pioneering technology innovator in the field of commercial nuclear. We are dedicated to developing solutions that serve our clients' needs, while protecting public safety and the environment.

Our Strategic Commitments

- Support policies that advance the generation and use of low carbon, reliable nuclear power to protect the health, environment, and economic well-being of communities.
- Manufacture and supply fabricated equipment and components to support industrial sectors including nuclear power plants.
- Supply state-of-the-art solutions to manage nuclear liabilities and expand nuclear services in both the civil and defence sectors.
- Integrate environmental justice considerations and sustainable development principles into our company business practices, including those related to selection of contractors and suppliers.
- Establish an environmental management system in accordance with ISO 14001:2015 and continually evaluate to enhance overall performance in the organisation.
- Fulfil all legal requirements, compliance obligations and follow recognised and generally accepted industry standards and good engineering practices.

Our Values

We will deliver on our commitments by applying our policy statements that embed Holtec International's five values:

- Adhere to stringent standards in **safety** and environmental protection to prevent pollution and harmful impacts through development of sound processes and controls.
- Maintain **integrity** through impeccable standards of professional conduct.
- Demonstrate **accountability** in environmental stewardship to the community in which we serve.
- Foster and encourage **teamwork** at all levels in setting objectives and promoting sustainability in energy and resource consumption for continual improvement.
- Seek **open communication** with our stakeholders to educate and engage. Communication is key to identifying and addressing environmental opportunities, such as applying circular economy principles and taking climate change action.
